Rakshit Hooda

Full-Stack Developer
Rohtak, India | +91 8307582966 | rakshit.official703@gmail.com | github.com/rkhooda

SUMMARY

Computer Science undergraduate building full-stack products in TypeScript, React/Next.js, and Node.js, including a VS Code extension published on the Marketplace and npm, and a Tauri desktop app with an automated release pipeline. Seeking a full-stack developer internship where the code ships to real users.

SKILLS

Languages: JavaScript, TypeScript, Python, C++, Rust, SQL, HTML, CSS
Frameworks & Libraries: React, Next.js, Node.js, Express.js, Tailwind CSS, Prisma Object-Relational Mapper (ORM), Tauri, ethers.js
Databases: PostgreSQL, MongoDB
Tools & Platforms: Git, GitHub, GitHub Actions, Docker, Vercel, Cloudflare Workers, Postman, Visual Studio Code (VS Code) Extension Application Programming Interface (API)
Practices: Representational State Transfer (REST) API design, JSON Web Token (JWT) authentication, Continuous Integration / Continuous Deployment (CI/CD), responsive design, data structures and algorithms (C++)

EXPERIENCE

Generative Artificial Intelligence (AI) Intern | Riyalverse Technology, Remote | Jul 2025 – Aug 2025

- Integrated generative AI models into database-backed workflows during this virtual internship.
- Built and shipped a recipe-generation website as the primary internship project.

PROJECTS

Clixo | Decentralized data-labeling platform (Next.js, Express, PostgreSQL, Ethereum) | Oct 2025 – Present | github.com/rkhooda/Clixo

- Developed a full-stack TypeScript monorepo (159 commits) with a Next.js 15 frontend and an Express 5 backend of 14 REST controllers, backed by a PostgreSQL schema evolved through 6 Prisma migrations.
- Implemented wallet login with the Sign-In with Ethereum (SIWE) flow, issuing JSON Web Tokens (JWT) and using wagmi with RainbowKit for wallet connection on the client.
- Pinned task images to the InterPlanetary File System (IPFS) through Pinata at upload time.
- Designed the withdrawal endpoint to lock a worker's pending balance before sending the Ethereum payout with ethers v6, preventing duplicate payouts from concurrent requests.

Bellsy | VS Code extension and npm package (TypeScript, Node.js, Cloudflare Workers) | Apr 2026 – Jul 2026 | bellsy.vercel.app

- Published the extension to the VS Code Marketplace (54 installs, 166 downloads) and to npm, delivering in-editor and native desktop notifications when local coding agents (Claude Code, Codex, Gemini CLI) finish, fail, or wait on approval.
- Wrote a bellsy-run command-line wrapper that streams a command's lifecycle events to a local HTTP server started on activation, with automatic fallback to a free port when the default is taken.
- Built a relay on Cloudflare Workers, backed by SQLite Durable Objects, to carry events between terminals and editors that cannot share a local socket.

FlowPane | macOS desktop to-do app (Tauri 2, Rust, JavaScript) | Jan 2026 – Jul 2026 | flowpane.vercel.app

- Built a frameless, translucent, always-on-top task window (345 commits) that snaps to a screen edge and collapses to a slim strip that expands on hover.
- Implemented a focus timer, deadline reminders, color-coded notes, and restorable task history, persisted to a local JSON file with tauri-plugin-store and requiring no account.
- Automated releases with a GitHub Actions pipeline that builds the app on tagged pushes and publishes the macOS disk image, shipping v0.1.0 in Jul 2026 with a landing page.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science | Panipat Institute of Engineering and Technology (P.I.E.T), Panipat, India | 2024 – 2028 (expected)

- Collaborated in team hackathons under tight deadlines: Hack KRMU 4.0, a 54-hour build at K.R. Mangalam University (Feb 2025), and a hackathon at COER University, Roorkee.

CERTIFICATIONS

Augmented Reality / Virtual Reality (AR/VR) Training | P.I.E.T, Panipat | Jun 2024 – Jul 2024
